

Tinkering Lab Maker Kit

Guide

The Tinkering Lab kit is a set of electric motors, wooden parts, axles, and challenges to get your child to think creatively.

Starting Out

Safety is one of the most important things to remember when using the Tinkering Lab kit. The kit does contain small parts, so it should be kept out of reach of small children. Always make sure you wear safety glasses when tinkering. Always connect red wires to red wires and black wires to black wires. Make sure that you connect the red wire to the post on the battery with the + sign.

The first thing to do is remove all the parts and lay them out in front of you so you can see what you will be using to tinker. Next, choose a catalyst card for an idea of what to build. You don't have to use the catalyst cards; you can be creative and build anything you would like.

Troubleshooting

If you are having problems with the Tinkering Labs kit, visit the Tinkering Labs blog page here: <https://www.tinkeringlabs.com/blog/> or the Tinkering Labs Catalyst page located here: <https://www.tinkeringlabs.com/catalyst/>.
